### Alternative 9

This alternative provides a mix of National Forest uses and activities while maintaining a supply of timber comparable to or greater than the last 15 years.

This alternative is the current Tongass Land Management Plan (1979, amended 1986 and 1991).

Commercial timber harvesting uses primarily even-aged management with average 100-year timber stand rotations. Retention of key old-growth forest habitat is provided.

Riparian management follows requirements of the Tongass Timber Reform Act and incorporates the use of Best Management Practices.

The beach and estuary fringe standards and guidelines are not applied.

Protection for caves follows the National Cave Resources Protection Act.

No new Research Natural Areas or Special Interest Areas, and no Wild, Scenic, or Recreational Rivers, are recommended.

The Minerals and Transportation and Utility Systems Land Use Designation's are not used.

The Forest Service cannot assure the reliability or suitability of this information for a particular purpose. Original data elements were compiled from various sources. Spatial information may not meet National Map Accuracy Standards. This information may be updated, corrected, or otherwise modified without notification. For additional information about this data contact the Tongass Land Management Planning Team.
